

SAP Vendor Invoice Management Implementation

Fortune 500 Medical Devices Company Gains Efficiency with SAP Vendor Invoice Management Implementation

Vendor invoice management (VIM) implementation successfully completed for Fortune 500 medical devices company looking to increase efficiency and accuracy. Full ERP system integration created ease of use and fluency among the client's business units, as well as an improved experience and process for the client's vendors.

CLIENT PROFILE

Large medical devices company headquartered in Boston, MA

BUSINESS CHALLENGE

A global medical devices company needed an end-to-end, newly released version of a finance application designed to pay vendors on time, and accurately. The installation of a vendor invoice management (VIM) application was unable to be done with a traditional upgrade because the VIM application currently being used lacked an upgrade path from version 5.0 to 7.0.

PROJECT OBJECTIVE

LABUR worked with key stakeholders to identify project objectives and define a scope of work, including conducting all requirements gathering. Working with inhouse developers and consultants to the project to configure the application, LABUR provided domain expertise from project scope and requirements through user support after go-live.

CASE STUDY

In addition, LABUR helped stabilize the implementation, providing user assistance and testing, as well as categorizing and providing a ranking system for support requests from users and business units post-go-live.

DELIVERED RESULTS

The client was able to gain business efficiency by installing the latest version of the vendor invoice management application without disruption.

- Automation and increased efficiency in vendor management and process
- SAP/VIM implementation resulted in operational and resources cost savings for the client, including optimizing invoice management accuracy and efficiency
- Full ERP system integration for ease of use and fluency among business units
