

Assembling a Scrum "Dream Team"

CASE STUDY

In 2021, LABUR was approached by a leading Financial Services provider to assemble a Scrum Team that focused exclusively on key data and analytics business initiatives.

CHALLENGE

This client had a significant amount of demands and requests for technical data work to be accomplished in support of their business. This data work was considered a top initiative for the second half of 2021 and into 2022 but our client didn't have the internal bandwidth to complete the work themselves.

HOW LABUR RESPONDED

LABUR assembled a cohesive, high performing Scrum Team comprised of highly skilled consultants who had never worked together prior to this project. Our approach was designed to be flexible while functioning as an integral part of the client's organization.

RESULTS

Enhanced performance data on firm's various investment vehicles

Optimized third party data that is instrumental in performance and historical analysis

Upgraded data and processes to manage trading compliance

Expanded responsibility with LABUR's Scrum Master managing a second client team

Remained the only intact scrum team while all other teams were reassigned

Original 6-month contract continues to be renewed for two years and counting

"Your team has raised the bar for our existing Scrum Teams, which is terrific. It's been really good for consultants to come in, raise the bar, and make that kind of positive impact."
