

Legacy ERP to SAP Migration & Implementation

OVERVIEW

Our life sciences client was migrating/implementing SAP from an antiquated legacy ERP system. Through our strategic resourcing capabilities, we deployed a handful of technical and functional resources to support the implementation effort. These resources consisted of an ERP Project Manager, two PowerBI Developers and two Informatica Developers.

CLIENT PROBLEM

A major life sciences organization had been running on a legacy ERP system and was in crucial need of an upgrade. The implementation and data migration was necessary for the firm to remain compliant and secure in addition to improving overall efficiency and optimization of business operations.

Our client had contracted a large System Integrator on the project, but there remained certain skills gaps that could not be filled internally. These gaps required resources with unique domain expertise to configure various ERP modules to meet business needs and train users on how to best utilize the system.

HOW LABUR RESPONDED

LABUR's Consultants worked within the Commercial Operations team to guide and support the transition process with our expert Project Manager at the helm.

Our PowerBI Developers assisted the implementation through developing and creating reports from Cognos and QlikView legacy items. They provided valuable guidance in the optimization of PowerBI as well as support on pre-SAP reporting needs.

Additionally, our Informatica Developers supported the critical conversion effort to transition data from the legacy ERP system to the new SAP platform and interface integrations with boundary applications.

RESULTS

Enhanced functionality and streamlined processes to improve efficiency across the enterprise

Improved decision-making with more robust reporting and analytics capabilities through real-time insights

Ensured sustainable, scalable systems that can adapt easily to change as our client grows

Ensured sustainable, scalable systems that can adapt easily to change as our client grows

How can LABUR provide the right resources for your organization's digital transformation?
